Claim Rejections - 35 USC § 112

1. Claim 16 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 16, it is structurally indefinite, as to what "a solid first sheet material" is made of? Is it made (or comprised of) from the "at least one second sheet" or "at least one third sheet"? Furthermore, it is unclear as to whether the second sheet and the third sheet are the same material? The phrase "said liquid crystalline polymer" lacks antecedent basis; at the last line of claim 16 "t" is believed as an error. Clarification is required.

Claim Rejections - 35 USC § 102/103

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 16-20 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Furuta et al (US 6124004).

Application/Control Number: 10/736,928

Art Unit: 1775

Furuta discloses a laminate comprised of a liquid crystal polyester resin composition and a layer of fiber material.

The fiber material can be an organic fiber material such as an aramid fiber which can be a non-woven fabric (col 12 L 60-61 & col 3 L 4). The fiber material is impregnated into the crystal polyester resin composition to form the laminate. A metallic foil can be laminated onto the laminate (col 14 L 14-17). The metallic foil and the fiber reinforced liquid crystal polyester are heat press bonded by heat roll and pressing machine to obtain a laminate (col 12 L 30-37). The laminate with a metallic foil is particularly useful as circuit board (col 1 L 15-21).

Furuta's laminate has a low relative dielectric constant, low dielectric loss constant and low water absorption properties (col 2 L 36-39).

Furuta is silent about the apparent density. In view of the prior art teaching, it would have been obvious to a skill artisan to fabricate a prepreg that has a desired density because the density can be controlled by a choosing the type of liquid crystalline polymer and its viscocity, and also by the temperature and pressure applied to the prepreg.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Cathy Lam whose telephone number is (571) 272-1538. The examiner can normally be reached on 9am-6pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Deborah Jones can be reached on (571) 272-1535. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
